Experience

2023

INGCOPH TRADERS INC. (Current Work)

Junior Programmer Associate

Worked collaboratively with senior developers to design, develop, and maintain software applications, ensuring alignment with business requirements. Contributed to coding efforts, focusing on writing clean, efficient, and well-documented code to support various projects within the IT department.

2023

NDA (Website)

QA Tester

As mentioned, I have a Non-Disclosure Agreement with this company but I am allowed to put into my resume the role I played in this project. Most of the Website was finished and I was hired to find bugs and fix them or notify the developers in order to create a bug free website before deploying in the given timeframe. most of what I did was Manual Testing without the use of Automation for testing.

2021-2023

STI College of Caloocan

Capstone Design Project | QIOSK

I added this project in my experiences since this project jumpstarted my career in the software Industry. I was the Back-end Developer on our team for this project in which I closely worked on PHP and SQL to connect to our Front-end and make all the automations of our backend working. I also practiced Documentation for this project.
