PROJECT WORK

Manga Appt App | Developer | [Repo](#)

2023

A Ruby on Rails app for reading manga, where users can share opinions when logged in, and admins can delete inappropriate comments.

- Implemented login and logout functions using the Devise gem, enhancing user authentication.
- Developed a comment system with edit and delete functionalities, allowing admins to manage all comments and users to manage their own.
- Enabled only registered users to comment on the website, increasing user engagement and security.

Slack App | Developer | [Repo](#) | [Live](#)

2023

A React application where registered users can send and receive messages and create channels.

- Developed a React application with Firebase authentication, providing secure login functionality.
- Implemented a real-time chat feature with channel creation and message reception.

Stock App | Developer | [Repo](#)

2023

A Ruby on Rails application where registered users can buy and sell stocks.

- Integrated stock market data API to fetch real-time data and generate dynamic charts, improving data visualization.
 - Developed buy and sell functionalities within the application, streamlining user transactions and enhancing user engagement.
-
